CONCEPT TO DELIVERY IN 99 DAYS

Our Passion

We build software products because it's our passion. We are highly focused in providing high quality outsourced product engineering services to Independent Software Vendors (ISVs), to enhance the product quality and time-to-market with optimal costs.

Quality as a differentiator

Over time, we have adopted and implemented the elements to ensure quality at our workplace. We have achieved 'zero' critical defects at customer delivery, and our processes comply with ISO Quality standards and 99X Technology is the first company in Sri Lanka to be CMMi Level 3 certified.

What we have done

We have helped our customers to build over 150 software products of different complexities, domains and technologies for more than a decade. This includes many full life cycle concept-to-market product engineering projects as well as product extension projects. We have served both established and startup ISV companies during our journey.

Partnerships

Trust, Commitment and Quality are the essential elements that we share in our relationships with partners along with a common passion of building software products. Overtime, the employees of 99X technology blend in with our customers that they ultimately evolve to become partners. We believe that it vital for us to be integral part of the customer's work process in order to assist them to reach their goal effectively and efficiently.

Research and Innovation

At 99X Technology, we focus on institutionalizing innovation. Our research centers' on creating organizational conditions that will drive new products, processes and business models. With the understanding that protecting yesterdays' products and technologies close doors to innovation.
